

Project Initialization and Planning Phase

Date	15 July 2026
Team ID	XXXXXX
Project Name	FloodGuard - AI/ML Flood Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement to understand your customer's point of view. A well-articulated customer problem statement allows the team to find the ideal solution for the customers' challenges.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A disaster-management officer monitoring a flood-prone district	assess flood risk before it happens	current rainfall bulletins only report raw numbers, not risk	there is no simple tool that converts weather data into a clear flood/no-flood signal	anxious about issuing warnings too late
PS-2	A local resident living near a river	know in advance whether heavy rainfall this week is dangerous	I have to rely on word-of-mouth or generic news alerts	there is no accessible, data-driven early-warning tool for my area	unprepared and worried during monsoon season
PS-3	A student/developer studying applied ML	build and deploy a real, working flood-prediction system	most tutorials stop at a Jupyter notebook and never reach production	there was no end-to-end template covering data → model → Flask → deployment	unsure how to turn a model into a usable product
